USC Friends and Family Discount

**Schedule today for a FREE consultation
and 20% procedure discount**

Our expert ophthalmologists will perform a thorough eye examination to determine if you are a good candidate for one of our multiple laser procedures or corneal/lens-based refractive surgeries.

Conditions We Treat

- Astigmatism
- Hyperopia (Farsightedness)
- Myopia (Nearsightedness)
- Presbyopia

Advanced Technology and Innovative Treatments

The USC Roski Eye Institute laser vision correction service is home to one of the most advanced excimer lasers used in the world today. With our innovative All-Laser LASIK procedure, we can correct all forms of nearsightedness, farsightedness and astigmatism, and reduce one's dependence on reading glasses. Moreover, we possess one of the most sophisticated femtosecond lasers in the world for performing vision-saving laser cataract surgery at our cutting-edge facility. It is our special brand of priceless clinical expertise combined with state-of-the-art technology that ensures exceptional patient outcomes at the USC Roski Eye Institute.

Laser Vision Correction Service at the USC Roski Eye Institute

Pioneers in Laser Vision Correction Research

- Our surgeons at the USC Roski Eye Institute conducted one of the early FDA-supervised clinical trials that established the safety and efficacy of excimer laser vision correction.
- The USC Roski Eye Institute was one of the first eye centers in the nation to offer laser vision correction.

If you have been living with astigmatism, hyperopia, myopia, or another condition affecting your eyesight, know that better vision is possible today through the cutting-edge treatments available at the USC Roski Eye Institute. All of our physicians are certified by the American Board of Ophthalmology and are fellowship-trained subspecialists.
